Overview

The scope of this document is to provide the release notes of the Traffic API, version 6.0.42.0. It includes the issues solved within this release.

Highlights

Release 6.0.42.0 incorporated these highlights:

- This release includes performance improvements.
- This release includes update of Customer Specific Profiles.

API Changes

There are no changes introduced to API with this Release.

Map Data Versions

This release contains map data from 2015Q1.

Service Endpoint Changes

There are no changes for endpoints in this release.

For more information about endpoints, please see the Traffic API Developer Guide.

Issues

This section contains resolved issues for this service release.

Known Issues

The following table contains known issues.

Issue #	Description
1	TRAFFIC: Data inconsistency (No "slip road" attribute)
2	TPEG: server sends questionable precise information for short tmcs

Issue #	Description
3	NullPointer in TrafficRenderer when sub segments are removed during rendering

Resolved Issues

The following table contains resolved issues. This list summarizes the major resolved issues relevant for a broad audience.

Issue #	Description
1	TPEG/TrafficService: RequestMediaTypeToLowerCase puts request string to lower case for all JSON requests
2	A NullPointerPointer in Traffic Proximity Search
3	Tomcat version revelaed for failing requests
3	FLOW: Query for corridor with negative coordinates could not be executed

No external defects were fixed by this release
