Name:	Platform Data Extension API Release Notes
Id:	d71b831-1437141024
Status:	FINAL
Date:	2015-Jul-17, 13:51 (GMT)

Overview

The scope of this document is to provide the release notes of Platform Data Extension API, with respect to a particular release version. It also includes the issues reported, open and solved within this release.

Known Issues

- No known issues.

Added Functionality

The highlights of this release are the following:

- Added new layer "Census Boundaries" for a growing set of countries. Please note that this layer is delivered as a separate map, it is not included in the map regions such as NA, WEU, EEU. Also, each country is represented as a separate layer, because each country's census data have a proprietary set of administrative levels and census attributes.

- Added new resource `tiles.json`/`tiles.txt`. Currently, the resource specifies the maximum number of tiles to request in a `singletiles.json`/`tiles.txt` HTTP request and the maximum number of key values to request in a single `index.json`/`index.txt` HTTP request. This might be subject to change in the future.

- Added new resource `serviceconfiguration.json`/`serviceconfiguration.txt`. It returns important limits that might change, currently the maximum number of tiles to request in a `singletiles.json`/`tiles.txt` HTTP request and the maximum number of key values to request in a single `index.json`/`index.txt` HTTP request.

- Added new parameter `meta=1` for `tile(s).json`/`tile(s).txt` to get the information about the tile - `layer`, `tilex`, `tiley`, `level`, `region` and `release`.

- Documentation resources like `layers.json` can now also be used without the parameters `region` and `release`, specifying the definitions for all regions and/or the latest available release respectively.

Resolved Issues

No resolved issues.

Signature Changes

We made the following changes:

Changes That May Require Adapting Existing Applications

- none
