Document Information

Product

Name: Geofencing Extension API

Version: Version 1.1

Document

Name: Geofencing Extension API Release Notes

Id: bafcd95-1448461213

Status: FINAL

Date: 2015-Nov-25, 14:20 (GMT)

Overview

The scope of this document is to provide the release notes of Geofencing Extension API, with respect to a particular release version. It also includes the issues reported, open and solved within this release.

Known Issues

- Some customer-submitted geo fenc polygons as well as some polygons in map layers are treated as polylines. Hence, the distance to the polygon border will be returned correctly, but the distance is always positive, even if the asset coordinate is inside the polygon. The bug fix will be deployed a.s.a.p.

Added Functionality.

- Geo fences can not only be polygons, but also polylines or points.
- Polygons, polylines and points of interest in Geofencing Extension API map layers can also be used as geo fences.
- In one 'check' request, the asset position can be checked against multiple geo fence layers.

Resolved Issues

No resolved issues.

Signature Changes

Added

- The 'check' resource got new query parameters: layer_ids, maplayer and maplayers. They allow for checking against multiple layers in a single request, and to check against Geofencing Extension API map layers.

Removed

- No attributes or resources have been removed.
