Chapter 1

Overview

Topics:

- [Map Data Version](#)
- [Highlights](#)

This document provides a summary of important changes for this version. Apart from newly resolved issues and added or improved functionality, this document also includes information about known issues remaining in this release as well as any existing limitations and workarounds.

Map Data Version

The Geocoder Autocomplete API provides weekly map data updates. Weekly map data updates are based on 2017Q2 data releases for most countries.

The following exceptions exist for countries with HERE map content coverage:

- Hong Kong and Macau are from 2016Q4 and are not updated on a weekly basis.

Entry or Intermediate map content coverage are not listed here.

Highlights

Changes to this release are all related to map data. No functional changes or other improvements are added.

Chapter 2

Changes

Topics:

- [Functional and Behavioral ...](#)
- [API Changes](#)
- [Resolved Issues](#)
- [Known Issues](#)
- [Limitations and Workaround...](#)

This section documents major changes to the release that may require you to update your applications and/or associated map data.

Functional and Behavioral Changes

There are no added or changed functionalities, or changes in product behavior, in this release.

API Changes

Added

- None

Changed

- None

Removed

- None

Resolved Issues

The following table contains resolved issues. The list summarizes major resolved issues relevant for a broad audience.

#	Description
1	<p>In the Czech Republic and Slovakia there is a dual house numbering system "conscription number/sequential number". Autocompletion previously required both numbers to be provided; this has now been changed to allow either number to be used.</p> <p>Example</p> <pre>query=Krškova 1338 V&country=CZE</pre> <p>Previous result: no result.</p> <p>Current result: find the address in the list of suggestions:</p> <pre>{ suggestions: [{ label: "Česká republika, Velké Meziříčí, Krškova 1338", language: "cs", countryCode: "CZE", locationId: "NT_7M3UEAAIGISI9Y-3FXge.D_xMzM4A", address: { country: "Česká republika",</pre>

#	Description
	<pre>state: "Vysočina", county: "Žďár nad Sázavou", city: "Velké Meziříčí", district: "Velké Meziříčí", street: "Krškova", houseNumber: "1338", postalCode: "594 01" }, matchLevel: "houseNumber" }] }</pre>

2 For English and Traditional Chinese "No." and "號" are used with the house number (as a prefix in English and as a suffix in traditional Chinese). Previously when these descriptors were used with an address, no suggestions were provided. This has now been corrected.

Example 1

query=No. 10, Jing Cheng 31th St., West District, Taichung City, 403, Taiwan&country=TWN

Previous result: no result.

Current result: find the address in the list of suggestions.

Example 2

query=臺灣403台中市西區市府路1號&country=TWN

Previous result: no result.

Current result: find the address in the list of suggestions.

Known Issues

There are no known unresolved issues in this release.

Limitations and Workarounds

There are no limitations and workarounds in this release.
