Overview

This document provides a summary of important changes for this release. Apart from newly resolved issues and added or improved functionality, this document also includes information about known issues remaining in this release as well as any existing limitations and workarounds.

Highlights

The following highlights give a short summary of the most important changes, added functionality and improvements:

- We improved Getting Started Guide and API specification document
- We added Aliases and Metadata APIs, which enables associating external system ids, and metadata to trackers.

Changes

This section documents major changes to the release that may require the updating of affected applications.

New Features

The following table lists new features in the current release.

API	DESCRIPTION
Aliases	Enables a tracker to be associated with an external system ID in a way that is neither part of the reported state of the device or the desired state
Metadata	Enables to store descriptive information associated to a tracker or geofence

Functional and Behavioral Changes

There are no functional or behavioral changes in this release.

API Changes

The sections below list APIs that were added, changed, or removed.

Added

- New Aliases API
- New Metadata API
- New end-point in Registry API to get Tracking license information

Changed

There were no APIs changed in this release.

Removed

There were no APIs removed in this release.
